

# Yury Zhauniarovich

Minsk, Belarus

✉ [yury@perfectequanimity.com](mailto:yury@perfectequanimity.com)

📄 [zhauniarovich.com](http://zhauniarovich.com)

## Career Track

Apr. 2019 – **Head of R&D**, *Perfect Equanimity*, Minsk, Belarus.

current **Responsibilities:**

- Coordination of research efforts
- Requirements specification
- Research and development

Jul. 2017 – **Scientist**, *Qatar Computing Research Institute (www.qcri.com)*, HBKU, Doha, Qatar.

Apr. 2019

**Responsibilities:**

- Research and development

Dec. 2015 – **Postdoctoral Researcher**, *Qatar Computing Research Institute (www.qcri.com)*,

Jun. 2017 *HBKU*, Doha, Qatar.

**Responsibilities:**

- Research and development

Sep. 2016 – **Lecturer of the Course “Network security”**, *Hamad Bin Khalifa University*

Dec. 2016 (*www.hbku.edu.qa*), Doha, Qatar.

**Responsibilities:**

- Preparation and giving lectures on Wireless and Mobile Security
- Homework and exam tasks preparation and check

May 2014 – **Postdoctoral Researcher**, *University of Trento (www.unitn.it)*, Trento, Italy.

Oct. 2015 **Responsibilities:**

- Project coordination
- Development of research prototypes

Feb. 2015 – **Lecturer of the Course “Network security”**, *University of Trento (www.unitn.it)*,

Sep. 2015 *it*), Trento, Italy.

**Responsibilities:**

- Preparation and giving lectures on Network Security

May 2014 – **Teaching Assistant for the Course “Network security”**, *University of Trento*

May 2014 (*www.unitn.it*), Trento, Italy.

**Responsibilities:**

- Giving lectures on Android security (2h: Essentials of Android OS security; 4h: Android App Security, dissection of an app using AndroGuard to show insecure patterns, Overview of the latest Android security research achievements)

- Mar. 2013 – **Teaching Assistant for the Course “Network security”**, *University of Trento*  
 Apr. 2013 (*www.unitn.it*), Trento, Italy.  
**Responsibilities:**
- Giving lectures on Android security (2h: Essentials of Android OS security; 2h: Android App Security, dissection of an app using AndroGuard to show insecure patterns)
- Feb. 2011 – **Teaching Assistant for the Course “Network security”**, *University of Trento*  
 July 2011 (*www.unitn.it*), Trento, Italy.  
**Responsibilities:**
- Giving lectures on Android security (2h: Essentials of Android OS and app security)
  - Giving lectures on Android app development (4h: Introduction to app development)
  - Conduction of laboratory classes (12h: Development of security-related Android apps)
  - Controlling of results (2h: Presentation of apps developed during the course)
- Apr. 2007 – **SAP SD/LE Consultant, Business Analyst**, *SAP Consulting Department, Itransition*  
 Oct. 2009 (*www.itransition.com*), Minsk, Belarus.  
**SAP SD/LE consultant responsibilities:**
- Customer interviewing
  - Initial training of business users
  - Business processes modeling and re-engineering
  - SAP ERP SD/LE modules customization
- Business analyst responsibilities:**
- Prototype design
  - Business requirement management
  - Business process design, review and modeling
- Jan. 2006 – **Part-time Developer**, *Department of Applied programs, Belarusian State University*  
 Mar. 2007 (*www.bsu.by*), Minsk, Belarus.  
**Responsibilities:**
- Borland C++ Builder developer
  - MS SQL database designer

## Research Projects

### Cyber Intelligence

- Suspicious Domain Detection** The purpose of this project is to build a scalable, effective and efficient platform that can be used to detect domains involved in different suspicious activities, e.g., botnet C&C domains, domains generated algorithmically, phishing domains, etc. The end goal is to detect these domains in advance, before they are started exploited for malicious purposes. As the first step, we made a survey on how malicious domains can be detected [5].
- Technologies:** Elasticsearch, Kibana, Python (jupyter notebook, scikit-learn, pandas, elasticsearch-py, asyncio)

**Qatar Cyber Intelligence Platform** The purpose of this project is to build a highly scalable, opened cyber intelligence platform that can be used to analyze data in a near real time basis. Therefore, as building blocks for this platform we use the components that are open-sources and can be easily scaled horizontally, e.g., Apache Storm or Elasticsearch. Further, we aim at applying this platform for the analysis of data in different areas of security research. In particular, so far we have used this platform to collect, store and analyze the data obtained from honeypots used to understand amplification denial of service attacks [6]. On top of that we proposed a system and a tool to assess and visualize the amount of traffic that enters and leaves ISP network in case it contains innocent amplifiers. The work was presented at the IEEE Symposium on Visualization for Cyber Security 2016 [8].

**Technologies:** Elasticsearch, Apache Storm, Apache Kafka, Kibana, Java, Python (jupyter notebook, scikit-learn, pandas, elasticsearch-py, amppot)

### Android Security

**Dissecting Android Cryptocurrency Miners** Within this project, we collected a large dataset of Android cryptocurrency miners. We carefully analyzed the samples from the dataset, identified static features, and proposed a system to detect miners using dynamic attributes. We responsibly share the results of our work with the community [1].

**Technologies:** Virustotal, Snapdragon Profiler, Python (pandas, jupyter notebook)

**Android Code Coverage** Within this project, we try to identify how code coverage metrics collected in a blackbox manner could be useful in various Android application analysis scenarios. The first prototype of the system to collect fine-grained code coverage metrics [13] has been considerably improved [3, 4]. The latter system has been used to evaluate how fine-grained code coverage metrics can improve the efficiency of automated testing tools [2].

**Technologies:** Python (pandas, jupyter notebook)

**Android Permission Evolution Analysis** In the scope of this project we have explored the evolution of the permission system in the Android operating system. In particular, we have analyzed what permissions are added, deleted or modified between different versions of Android; how protection level and permission flags influence on the behavior or the corresponding permissions. The results of this works were published at the International Symposium on Research in Attacks, Intrusions and Defenses 2016 [10].

**Technologies:** AOSP, Python (pandas, jupyter notebook)

**MobileShield** In the scope of this project we have developed a prototype of the system that is able to detect the fraud of a smartphone on a near real-time basis. Moreover, we have proposed a new machine learning based method for passive user authentication using smartphone sensor data. This work will be presented at the IEEE International Conference on Identity, Security and Behavior Analysis 2017 conference [7].

**Technologies:** Java, Android, WebSockets, VPN, Python (scikit-learn, pandas, jupyter notebook)

- Analysis of the Android apps in the presence of dynamic code update features** In this project we have studied how Android applications use dynamic code updates features, in particular, reflection and dynamic class loading. These features are often used to conceal malicious behavior of Android apps. We have proposed a novel approach for dissection of the apps containing dynamic code update features combining static and dynamic analysis techniques. The results of this work were presented at the ACM Conference on Data and Application Security and Privacy 2015 conference [12].  
**Technologies:** AOSP, Java, Python (AndroGuard)
- Detection of Repackaged Android Applications** In the scope of this project we explore novel techniques to detect repackaged Android applications. Based on the research we proposed an approach that compares Android apps detects the repackaged ones in a very fast way. We presented the results of this work at the DBSec '14 [18] and the NordSec '16 [9] conferences.  
**Technologies and tools:** Java, Python (AndroGuard, scikit-learn)
- Trusted Stores in Android** During this project we investigated how the concept of “trusted stores” can be implemented for Android. Our approach ensures that a user can install only the applications vetted and attested by trusted stores. The demo of our system was presented at the ACM Conference on Computer and Communications Security 2013 conference [20], while the detailed description is given in the technical report [17].  
**Technologies and tools:** AOSP, Java
- Enforcing Security Profiles in Android** During this project we developed a policy-based framework for enforcing software isolation of applications and data that may help to improve the security of end-user devices. The operation of our system was shown at the ACM Conference on Computer and Communications Security 2012 conference [22], while the paper discovering the peculiarities of MOSES will be published in the IEEE Transactions on Dependable and Secure Computing [19].  
**Technologies and tools:** AOSP, Java, C, TaintDroid
- Context-Related Policy Enforcement** In this work we implemented a system called CRêPE that allows to specify and enforce the behavior of smartphone applications depending on the context. In CRêPE a context may be defined using the values provided by physical sensors or/and logical sensors. The policies enforced by CRêPE may be set both by a user or authorized third party locally (using a special application) or remotely (through SMS/MMS, QR codes and Bluetooth). The results of this work are published in the IEEE Transactions on Information Forensics and Security [21].  
**Technologies and tools:** AOSP, Java, C
- Collusion Attack Prevention in Android** In the work we extended the Android operating system with an ability to enforce fine-grained policies, which in turn help to mitigate the problem of applications leaking sensitive information using collaboration. In particular, we used TaintDroid to assign special taints to the sensitive information and implemented an enforcement point that enforces the fine-grained decisions according to the specified policies. This work was presented at the PASSAT/SocialCom 2011 conference [23].  
**Technologies and tools:** AOSP, Java, C, TaintDroid

---

## Education

Nov. 2009 – **Ph.D. in Information and Communication Technology**, *University of Trento*  
 Apr. 2014 ([www.unitn.it](http://www.unitn.it)), Trento, Italy.  
*Thesis:* Improving the Security of the Android Ecosystem  
*Advisor:* Bruno Crispo

- Sep. 2006 – **M.Sc. (eq.) in Computer Science**, *Belarusian State University* ([www.bsu.by](http://www.bsu.by)),  
June 2007 Minsk, Belarus.  
*Thesis*: Steganographic Data Hiding Audiosystem with Heightened Throughput Capacity  
*Advisor*: Vasiliy Sadov
- Sep. 2002 – **B.Sc. in Computer Science**, *Belarusian State University* ([www.bsu.by](http://www.bsu.by)), Minsk,  
June 2006 Belarus.  
*Thesis*: Development of a Web Ordering System for the University Computer Classes  
*Advisor*: Natalia Novikova

---

## Important Achievements

- The author of the free book “Android Security (and Not) Internals” [15] ([www.zhauniarovich.com/files/asani/asani.pdf](http://www.zhauniarovich.com/files/asani/asani.pdf))
- Reviewer of the book “Android Systems Development” by Earlence Fernandes ([www.packtpub.com/android-systems-development-how-instant/book](http://www.packtpub.com/android-systems-development-how-instant/book))
- 15.000+ reputation on StackOverflow ([www.stackoverflow.com/users/1108213/yury](http://www.stackoverflow.com/users/1108213/yury))
- Android Open Source Project contributor

---

## Honors, Awards and Grants

- Nov. 2009 Ph.D. Scholarship from the University of Trento  
Sep. 2002 Scholarship from Belarusian State University  
June 2002 Graduated Cum Laude from Lyceum BSU  
May 2002 Winner of the BSU Olympiad in Physics

---

## Talks

- June 29, 2018 Invited talk at the University of Luxembourg, organized by Dr. Olga Gadyatskaya; Luxembourg, Luxembourg
- Mar. 06, 2017 Invited talk at the University of Luxembourg, organized by Dr. Olga Gadyatskaya; Luxembourg, Luxembourg
- Sep. 21, 2016 Conference talk at the RAID '16 conference; Evry, France
- Apr. 30, 2014 PhD thesis defence talk at the University of Trento; Trento, Italy
- Feb. 27, 2014 Invited talk at the University of Rome “La Sapienza”, organized by Prof. Luigi V. Mancini; Rome, Italy
- Feb. 20, 2014 Invited talk at the University of Luxembourg, organized by Dr. Olga Gadyatskaya; Luxembourg, Luxembourg
- Aug. 27, 2014 Tutorial on Android Security at the CRISiS '14 conference [11]; Trento, Italy
- July 14, 2014 Conference talk at the DBSec '14 conference; Vienna, Austria

---

## Mentoring

### Master Students

- July 2017 – **Talal Shoeb**, *Hamad Bin Khalifa University* ([www.hbku.edu.qa](http://www.hbku.edu.qa)), Doha, Qatar.  
Dec. 2018 *Thesis*: Insight: A Kibana Visualization Plugin for Multidimensional Data Exploration

July 2017 – **Priyanka Dodia**, *Hamad Bin Khalifa University* ([www.hbku.edu.qa](http://www.hbku.edu.qa)), Doha,  
June 2018 Qatar.

*Thesis: Honey-pot-Based Filtering of Amplification Traffic in ISP Networks*
